

## Product brief: Field Inspection Assistant

**Purpose.** Give inspectors a fully offline assistant on a rugged tablet so that checklists, prior reports and equipment manuals are available without a network.

**Pilot.** Three pilot sites are planned for Q4 2026: Pune, Chennai and Kochi. Each site gets six tablets and a two-week onboarding. Success means a 20% reduction in report turnaround time and no inspection blocked by connectivity.

**Scope.** The assistant answers from the shipped knowledge base only. It does not submit reports, does not talk to the ERP, and keeps all data on the device.

**Timeline.** Bundle authoring in September, device provisioning in October, pilot review in the first week of December.
